

Know your Pool Size

Ensuring your pool stays crystal clear starts with choosing the right chlorinator for your pool size. To find the perfect fit, you'll need to calculate your pool's volume. Simply multiply the length, width, and average depth of your pool, then use the following conversion:

Litres = Length (m) × Width (m) × Average Depth (m) × 1,000

For example, if your pool is 8m long, 4m wide, and has an average depth of 1.5m, the calculation would be:

$$8 \times 4 \times 1.5 \times 1,000 = 48,000 \text{ litres}$$

Knowing your pool's volume allows you to select a chlorinator with the right capacity to keep your water balanced and sparkling clean all year round.

Ultimate Chlorination

Built for Australian conditions, the XT Salt Water Chlorinator delivers premium performance with high-quality components and commercial-grade cell materials.

Its intelligent micro-controller ensures efficient, reliable, and easy operation for both home and commercial pools. Simply set your preferences on the LCD display, and let XT handle the rest—maintaining perfect chlorine levels by adjusting to water temperature and salinity.

With a self-cleaning cell as standard, maintenance is minimal, saving you time and money. The compact, fully sealed design guarantees durability, making XT the ultimate choice in saltwater chlorination.

- Easy setup with adjustable display
- Self-cleaning for low maintenance
- Super-chlorinate and spa modes
- Backwash function for easy cleaning
- Monitors salt and water levels
- Auto adjusts to high salt
- Timer backup for power outages
- Durable, long-lasting cell
- Compatible with all 230/240V pumps
- Quick-release stainless steel bracket
